The No-Main Curtain

The all new No-Main Curtain is the lowest maintenance curtain on the market and operates without the use of a main cable. The No-Main system is very popular with farmers with large sidewall openings and long barns. Curtain systems can be arranged in a number of different configurations, catering to a wide variety of building and ventilation setups.

With this design the curtain is permanently fastened along the top of the opening. There is a center horizontal sleeve and in the sleeve is an automatic tubular actuator that rolls while travelling up, wrapping the curtain around the centre sleeve as it travels. The system is kept taut and can be locked down in winter months.

- No main cables.
- System can be integrated with any opening
- Low maintenance & long lasting!
- A variety of curtain material types and weights are available.
- Manual or electrical operation.
- Temperature controllers available for fully automated systems.
- Corrosion resistant hardware.
- Easy installation.
- Single output maximum length - 150'.
- Double output maximum length - 250'.
- Opening height of 2' up to 24'.
- Works on any type of structure, steel or wood etc.
